| Function         | Explanation  | Usage  |
|------------------|--|--|
| <b>AVEDEV</b>    | Returns the average deviation of data points from their mean*  | AVEDEV(Num1, Num2, Num3, ... as double; Num as Integer) as double  |
| <b>AVERAGE</b>   | Returns the average of a series of numbers*  | AVERAGE(Num1, Num2, Num3, ... as double; Num as Integer) as double |
| <b>BITSLLEFT</b> | Treats an integer as a series of 32 bits and shifts them to the left   | BITSLLEFT(Bits, Shift as Integer) as Integer                       |
| <b>BITSOFF</b>   | Treats an integer as a series of bits, and turns a specific bit off  | BITSOFF(Bits, Position as Integer ) as Integer                     |
| <b>BITSON</b>    | Treats an integer as a series of bits, and turns a specific bit on   | BITSON(Bits, Position as Integer ) as Integer                      |
| <b>BITSRIGHT</b> | Treats an integer as a series of 32 bits and shifts them to the right  | BITSRIGHT(Bits, Shift as Integer) as Integer                       |
| <b>CAND</b>      | Returns the boolean result of all the boolean input expression when logically ANDed together                     | CAND (bool1, bool2, bool3,... as Boolean) as boolean               |
| <b>CLEAN</b>     | Removes all non-printable characters from text (ASCII 1-31 and 128-159)  | CLEAN(S as String) as String                                       |
| <b>CMFEET</b>    | Translates CM to feet  | CMFEET(R as Double)as Double                                       |
| <b>CMINCH</b>    | Translates CM to Inches  | CMINCH(R as Double)as double                                       |
| <b>CNOT</b>      | Returns the Boolean result of logically negating the Boolean input   | CNOT (Boolean) as Boolean  |
| <b>COMBIN</b>    | Returns the number of combinations of groups you can form; differs from Permut in that the order does not matter | COMBIN(ItemsTotal, ItemsInGroup as Integer) as double              |
| <b>COR</b>       | Returns the Boolean result of all the Boolean expression inputs when logically ORed together                     | COR (bool1, bool2, bool3,...as Boolean) as boolean                 |
| <b>CTOF</b>      | Translates centigrade to fahrenheit  | CTOF(R as double) as double  |
| <b>CTOK</b>      | Translates centigrade to kelvin  | CTOK(R as double) as double  |
| <b>7-6 DAY</b>   | Returns the day given a date value   | DAY (date) as integer  |
| <b>EVEN</b>      | Rounds to the next highest absolute value even number  | EVEN(Value as Double) as Double                                    |
| <b>FACT</b>      | Returns N factorial (N!)   | FACT(N: Integer): double   |
| <b>FEETCM</b>    | Translates Feet to CM  | FEETCM(R as Double) as Double                                      |
| <b>FEETM</b>     | Translates Feet to Meters  | FEETM(R as Double) as Double                                       |
| <b>FTOC</b>      | Translates Fahrenheit to Centigrade  | FTOC(R as Double) as Double  |

| Function             | Explanation  | Usage   |
|----------------------|--|---|
| <b>GALLTR</b>        | Translates gallons to liters   | GALLTR(R as Double) as Double                                     |
| <b>HOURS</b>         | Returns the hours given a time value   | HOURS (time) as integer   |
| <b>INCM</b>          | Translates inches to centimeters   | INCM(R as Double) as Double                                       |
| <b>KGPOUND</b>       | Translates kilograms into pounds   | KGPOUND(R as Double) as Double                                    |
| <b>KMMILE</b>        | Translates kilometers into miles   | KMMILE(R as Double) as Double                                     |
| <b>KURT</b>          | Returns the Kurtosis of a series of numbers*   | KURT(Num1, Num2, Num3, ... as double; Num as Integer) as double   |
| <b>LTRGAL</b>        | Translates liters into gallons   | LTRGAL(R as Double) as Double                                     |
| <b>MAX</b>           | Returns the maximum value from a series of numbers*  | MAX(Num1, Num2, Num3, ... as double; Num as Integer) as double    |
| <b>MEDIAN</b>        | Returns the median value from a series of numbers*   | MEDIAN(Num1, Num2, Num3, ... as double; Num as Integer) as double |
| <b>MFEET</b>         | Translates meters into feet  | MFEET(R as Double) as Double                                      |
| <b>7-8 MILEKM</b>    | Translates miles into kilometers   | MILEKM(R as Double) as Double                                     |
| <b>MIN</b>           | Returns the minimum value from a series of numbers*  | MIN(Num1, Num2, Num3, ... as double; Num as Integer) as double    |
| <b>MINUTES</b>       | Returns the minutes given a time value   | MINUTES (time) as integer   |
| <b>MLOZ</b>          | Translates milliliters to ounces   | MLOZ(R as Double) as Double                                       |
| <b>MODE</b>          | Returns the mode (most frequently appearing) value from a series of numbers*   | MODE(Num1, Num2, Num3, ... as double; Num as Integer) as double   |
| <b>MONTH</b>         | Returns the month given a date value   | MONTH (date) as integer   |
| <b>NUMBERTOWORDS</b> | Takes a number ranging from 0 to 9,999,999,99999 and converts it to words<br><i>Example: ccNumberToWords(121) = "One Hundred Twenty One"</i> | NUMBERTOWORDS(R as double) as String                              |
| <b>ODD</b>           | Rounds to the next highest absolute value odd number   | ODD(Value: Double): Double  |
| <b>OZML</b>          | Translates ounces to milliliters   | OZML(R as Double) as Double                                       |
| <b>PERMUT</b>        | Returns the number of permutations of objects you can form; differs from Combin in that the order matters                                    | PERMUT(ItemsTotal, ItemsInGroup as Integer) as double             |

| Function              | Explanation   | Usage  |
|-----------------------|---|--|
| <b>POUNDKG</b>        | Translates pounds to kilograms  | POUNDKG(R as Double) as Double   |
| <b>PROPER</b>         | Takes a string and changes the capitalization so that the first letter of each word is capitalized and the rest are lowercase                                       | PROPER(S as String) as String  |
| <b>ROMAN</b>          | Converts a number to roman numerals, as a string X is an integer from 0 to 3999; RomanType can be 0,1,2,3, or 4 and determines how concise the final number is made | ROMAN(X, RomanType as Integer) as String                                 |
| <b>SECONDS</b>        | Returns the seconds a time value  | SECONDS (time) as integer  |
| <b>SQFEETSQM</b>      | Translates square feet to square meters   | SQFEETSQM(R as Double) as Double   |
| <b>7-10 SQMSQFEET</b> | Translates square meters to square feet   | SQMSQFEET(R as Double) as Double   |
| <b>STDEV</b>          | Returns the standard deviation of a series of numbers based on a sample of data*  | STDEV(Num1, Num2, Num3, ... as double; Num as Integer) as double         |
| <b>STDEVP</b>         | Returns the standard deviation of a series of numbers based on entire population*   | STDEVP(Num1, Num2, Num3, ... as double; Num as Integer) as double        |
| <b>SUBSTITUTE</b>     | Replaces an OldPart of a string with a NewPart where it occurs in a string, S; it will replace only the Instance specified, or all instances if Instance is zero    | SUBSTITUTE(S, OldPart, NewPart as String, Instance as Integer) as String |
| <b>TIMEOP</b>         | Returns the given number of seconds as time   | TIMEOP (integer) as time   |
| <b>TOTAL SECONDS</b>  | Returns the given time in total seconds   | TOTAL SECONDS (time) as integer  |
| <b>TRIM</b>           | Trims all spaces except single spaces from between words  | Trim(S as String) as String  |
| <b>VAR</b>            | Returns the variance in a set of numbers based on a sample of data*   | VAR(Num1, Num2, Num3, ... as double; Num as Integer) as double           |
| <b>VARP</b>           | Returns the variance in a set of numbers based on a complete population of data*  | VARP(Num1, Num2, Num3, ... as double; Num as Integer) as double          |
| <b>YEAR</b>           | Returns the year given a date value   | YEAR (date) as integer   |

\* Num is the number of numbers in the call, and must be from 0 to 1024
